

Dishank Saxena

Senior Full-Stack Engineer · AI Systems & Applied Machine Learning

dishanksaxenapro@gmail.com · +91 98765 43210 · Bengaluru, India · linkedin.com/in/dishanksaxena · github.com/dishanksaxena

SUMMARY

Full-stack engineer with 8 years building production systems that put large language models in front of real users. Shipped four products end to end — an AI hiring platform, an enterprise observability SaaS, a property-verification marketplace and an automated trading system — owning architecture, inference cost, and the reliability of every path a user touches. Comfortable across TypeScript, Python and Postgres, and equally at home tuning a retrieval pipeline or a database index.

EXPERIENCE

Founder & Principal Engineer — [ApplyMaster.ai](#)

Jan 2025 – Present · Bengaluru

- Built an AI job-application platform on Next.js 14, Supabase and the Anthropic API, taking it from zero to a live product with paying users.
- Designed a resume pipeline that parses PDF and DOCX into structured data and scores it against a posting, cutting time-to-first-application from 40 minutes to under 3.
- Wrote a deterministic referral-matching engine over the user's own network, ranking warm introduction paths ahead of cold applications — referrals convert at roughly 30% against 0.1–2%.
- Cut model spend 71% by moving text extraction off the inference path and routing classification to a smaller model, holding output quality flat.
- Drove ATS form automation with Playwright across Greenhouse, Lever and Ashby, with hard guardrails: never answers voluntary EEO questions, never defeats a CAPTCHA.

Senior Software Engineer — [3GP.AI](#)

Mar 2022 – Dec 2024 · Remote

- Built the ingestion tier for an enterprise observability platform handling 40,000 events per second across 200+ customer environments.
- Reduced p99 query latency from 1.8s to 240ms by restructuring the time-series schema and introducing pre-aggregated rollups.
- Led the migration from a Rails monolith to event-driven Node services with zero downtime and no customer-visible regression.
- Introduced anomaly detection over metric streams that cut false-positive pages by 62%, measured over two quarters of on-call data.
- Mentored four engineers; two were promoted to senior within the period.

Software Engineer — [GharVerify](#)

Jun 2020 – Feb 2022 · Bengaluru

- Shipped a property-verification marketplace serving 50,000 monthly users, owning the geospatial search and document-verification flows.
- Built PostGIS-backed radius search returning results in under 90ms at the 95th percentile over 2M indexed properties.
- Automated title-document checks with OCR plus rules, removing roughly 15 hours of manual review per week.

Software Engineer — [Silve Opal Labs](#)

Jul 2018 – May 2020 · Bengaluru

- Built an automated trading system for prediction markets executing on 5-minute BTC contracts, with backtesting over three years of tick data.
- Implemented position sizing and circuit breakers that capped a single-session drawdown at 4% of book.
- Wrote the market-data ingest in Python and Redis, sustaining sub-50ms tick-to-signal latency.

SELECTED PROJECTS

- **Referral Path Finder** — deterministic scoring over a user's network that ranks who can actually refer them, with the model used only to draft the ask, never to invent a connection.
- **LinkedIn Content Agent** — GitHub Actions pipeline that drafts and publishes technical posts on a schedule, matched to the author's own voice.
- **Portfolio Manager** — Express and Vite dashboard tracking a multi-asset book with live P&L and JSON-backed persistence.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, Go
Frontend	React, Next.js, Tailwind CSS, Framer Motion
Backend	Node.js, FastAPI, PostgreSQL, Redis, Supabase, REST, WebSockets
AI / ML	Anthropic API, LLM orchestration, RAG, prompt engineering, embeddings, evaluation harnesses
Infrastructure	AWS, Vercel, Docker, GitHub Actions, Playwright, observability and tracing

EDUCATION

B.Tech, Computer Science — Vellore Institute of Technology

2014 – 2018
